Teoxane Unveils Its New Syringes for Optimal Safety, Confidence, and Comfort

Teoxane, leader in the field of hyaluronic acid-based aesthetic solutions, announces the launch of its new generation of syringes. Designed to offer an optimal injection experience for practitioners, these syringes combine enhanced features with a premium design, meeting the needs of the most demanding healthcare professionals^{1,2}.

An Innovative Design for Safe and Comfortable Use

The new Teoxane syringes stand out with their ergonomic and elegant design, incorporating a wide range of improvements, enabling safer injections of all our **TEOSYAL RHA®** solutions, as well as **TEOSYAL® PureSense Ultra Deep, Redensity 1, Redensity 2**, and **TEOSYAL® PureSense Kiss**^{1,2}. Thanks to these innovations, practitioners can approach each technical gesture with confidence:

- **Improved grip and anti-slip design:** The gripping surface is now wider and softer, providing better handling. The handle, also wider and non-slip, ensures increased stability during use. Additionally, the more robust rubber fixation guarantees a firmer hold. These enhancements allow for safe syringe handling, reducing the risk of slippage during injections^{1,2}.
- **Balance and lightness:** The lightweight and balanced nature of the syringes makes them easier to handle, allowing for increased precision and better control of the technique^{1,2}.
- **Curved flange:** Adapted to all types of grips, it ensures perfect comfort for the practitioner, reinforcing their confidence during use^{1,2}.

These new features and improvements also contribute to enhanced patient safety. Easier and more precise handling by the practitioner reduces the risks of complications and ensures a better treatment experience^{1,2}.

Syringes as a Guarantee of Safety and Quality

According to an evaluation of the practicality of the new Teoxane syringes:

- **84% of healthcare professionals** stated that this device **optimizes patient safety during injection**¹.
- **97% of users** expressed their **satisfaction with the injection conditions**, highlighting the significant improvement in terms of comfort and control¹.

² Data on file. Technical Report for Marketing Acknowledgment regarding requirements associated to user needs for bi-material plunger rod and finger grips, September 2022

"The ergonomics and practicality of the new Teoxane syringes concretely illustrate our commitment to enhanced safety. Our goal is to offer better stability during injection, allowing doctors to work with more confidence, comfort, and precision. This optimized design not only ensures ideal injection conditions but also an improved aesthetic experience for the patient, guaranteeing an optimal and safe result for all." — **Charlotte de Reals, Global Head of Marketing Excellence.**

About Teoxane

Founded by Valérie Taupin in 2003, Teoxane Laboratories specializes in the development of hyaluronic acid-based solutions. With over 20 years of expertise, they are now pioneers in the science of facial beauty. The company was founded on a singular vision: to unlock the potential of aesthetic treatments through high-performance dermal fillers and dermocosmetics, based on rigorous scientific research. By listening, educating, and building the foundations of a safer industry, Teoxane has shaped a new era in aesthetic medicine, where small beauty gestures have a significant impact on patients' appearance and well-being.
